

Transdermal spray-on

For topical application, dilute the solution by 1/2 to make 50ppm. Spray directly onto the skin in case of wounds, burns, herpes, shingles, or other skin problems. The solution does not cause stinging or burning. It relieves pain and can also help stop bleeding. Spraying can be repeated several times daily (even once an hour or more if necessary).

## Detox and healing

Unless your body can relieve its toxic burden, healing is not possible. Disease does not occur *all of a sudden*; it is the eventual outcome of a body overburdened by toxins and pathogens that it can no longer cope with. Most people do not experience uncomfortable detox symptoms when using as suggested, even with several glasses a day. Start with one glass daily and gradually increase at your body's pace. If your body is very toxic, you may still experience temporary discomfort—this is a positive sign of detox!

## Herxheimer Reaction

The Herxheimer Reaction is a short-term detoxification reaction in the body that can last from a few days to a few weeks. It's common to experience flu-like symptoms as the body detoxifies, which is a normal and healthy healing response.

There are questions about why government regulators prevent the use of CDS for preventing and treating COVID or any disease, similar to Ivermectin and hydroxychloroquine (HCQ). CDS offers many health benefits, and it seems unjust not to provide open

access to it. Thankfully, CDS is accessible as a water purifier and disinfectant and is not a prescription drug like HCQ or Ivermectin.

## Tesla Scalar Vortex

Miracle Products' CDS TABS are Dynamically Enhanced using a proprietary advanced technology. Our Tesla Scalar Vortex generator produces Infrared Quantum Sound with 528 Hz and inert Noble Gases, each known to provide specific information and beneficial resonant health effects. This process

structures elements into coherent particles, increasing bioavailability and absorption while augmenting the inherent benefits of CDS, thereby requiring less to be used while enjoying superior results.

# CDS TABS Stabilised Water Purifying Tablets

*Dynamically  
Enhanced*

## CDS TABS Stabilised Water Purifying Tablets

Chlorine dioxide (CDS) is a gas that dissolves readily in water but does not react with water. CDS water solutions are extremely powerful, even at low concentrations. They are proven effective against all microorganisms, including viruses, bacteria, bacterial spores, fungi, biofilm, algae, and protozoa. CDS works by disrupting the functioning of microorganisms' cell membranes.

CDS is an oxidising biocide that is 99.9% effective against viruses, bacteria, fungi, spores, algae, mites, parasites, biofilms and pathogenic organisms.

Pathogens cannot build resistance to CDS, making it an extremely important compound in a world where many organisms are becoming resistant to conventional biocides and antibiotics.

## CDS is an extraordinary oxidant

When CDS comes into contact with acid, it becomes unstable and releases nascent oxygen. It is important to understand that most unhealthy microorganisms are anaerobic and cannot survive in an oxygen-rich environment.

.....  
**NASCENT DEFINITION:**  
**COMING OR HAVING RECENTLY**  
**COME INTO EXISTENCE.**  
.....

Nascent oxygen is a particularly potent oxidising agent for anaerobic organisms because it is essentially a free radical seeking not one but two electrons.

CDS is an oxidant, and just like oxygen, it supports the body and immune system while only targeting acid-thriving pathogens. It selectively targets the anaerobic, not the aerobic. It attracts pathogens based on their acidity and electric charge — bypasses good bacteria

and goes directly to the unhealthy ones. It's strong enough to go after all pathogens, viruses, bacteria, fungi, etc, without harming healthy tissues and oxygen-loving microorganisms.

*CDS surrounds pathogens and, through oxidation, electrically rips them apart by stealing their electrons.*

## Oxygen pH and voltage

When cells lose oxygen, they also lose their pH and voltage. When cell voltage is low, oxygen decreases, and pH becomes acidic, increasing anaerobic bacteria. Anaerobic microorganisms thrive in an oxygen-depleted environment.

CDS-stabilized powder creates a solution that has even been shown to neutralise many toxins, pesticides, herbicides and pharmaceuticals that contaminate drinking water. It makes an excellent veggie and fruit wash.

## Chlorine Dioxide vs Chlorine Bleach

The chemistry of CDS is radically different from that of chlorine bleach. It is biodegradable, environmentally friendly, and does not break down into harmful by-products.

It functions via an oxidative rather than chlorinating reaction, with no risk of producing

harmful chlorinated compounds. It precisely targets pathogenic microorganisms like viruses, fungi, and bacteria, among others. However, unlike chlorine, it even removes biofilm.

Because of this oxidative property, it can be used to purify water safely and effectively while completely deactivating microorganisms and toxins.

Activated and stabilised

Miracle Products’ CDS TABS generate chlorine dioxide that is free from undesirable by-products that occur when mixing an acid activator into sodium chlorite (MMS). CDS TABS do not require on-site activation before use, as the tablets are already completely activated and stabilised (unlike traditional MMS).

Historically, the big problem with CDS was its instability. It had to be made and used immediately, or the quality would deteriorate. Our CDS TABS are stabilised and solve this problem. To ensure effectiveness, once combined in water, it is best kept cool and out of direct sunlight when not in use, as the suspended chlorine dioxide molecule is active and sensitive to heat and direct sunlight.

CDS supports the microbiome

CDS bypasses good bacteria and goes directly to unhealthy ones; the stomach absorbs it and does not disturb the necessary and healthy bacteria in the intestines. As a dissolved gas, it can diffuse into biofilm and toxins, neutralising microorganisms. Conventional biocides, including chlorine, can only affect the surface layers of biofilm. Therefore, CDS is more effective than chlorine and chloramines in eliminating biofilm, deactivating viruses, and controlling Cryptosporidium and Giardia.

CDS IS ELECTRICALLY ATTRACTED TO ACIDS, PATHOGENS AND TOXINS.

Healing from disease

CDS is considered a miracle cure by thousands of people across the planet because it helped them cure their diseases, even diseases that are considered “incurable” by the Rockefeller Medicine industry. It has well earned its title as: *The Universal Antidote*

People have been using CDS to cure a wide range of infectious diseases, including antibiotic-resistant bacterial infections, malaria, influenza, candida, Lyme disease, hepatitis, HPV, HIV, and more. Others have had remarkable results in relieving arthritis, cancer, and other inflammatory diseases. One study shows the inactivation of poliovirus using CDS and iodine.

Spray healing wounds, herpes and shingles

CDS can be sprayed onto the skin to speed wound healing. It is remarkable for burns, herpes, shingles and any skin affliction. A customer who struggled with shingles for six months reported immediate relief when spraying the CDS onto his skin. Their shingles outbreak began to clear after four days of repeated spray application. Herpes around and in the eyes cleared within three days of repeated use and provided immediate relief to the irritation in the eyes. At 50ppm, CDS is safe to spray directly into the eyes for infections.

Safety studies

In a 2017 study, Efficacy and Safety Evaluation of a Chlorine Dioxide Solution<sup>1</sup>, mice drank water containing up to 40ppm CDS for 90 days. The concentration showed no toxicity in the sub-chronic oral toxicity test, and a 50ppm solution did not cause eye irradiation in an ocular irritation test.

CDS is safe when used appropriately in the minuscule quantities required to eliminate pathogens and benefit human health. The EPA has set the maximum concentration in drinking water at 0.8 milligrams per litre (mg/L). Many people use significantly higher concentrations of CDS solution over extended periods with no adverse reactions. Studies confirm excellent results in pathogen elimination, even at one ppm.

According to the *Globally Harmonised System of Classification and Labelling of Chemicals* (3rd Revised Edition–Australia), CDS is non-hazardous.

Chlorine dioxide for flu, viruses and COVID

A clinical trial was conducted in Ecuador on hospital patients diagnosed with COVID-19. All 100 participants experienced significant improvement within 48 hours and fully recovered. The study was assisted by biophysicist Andreas Kalcker, a prominent advocate of CDS, who speaks internationally on the subject. The tests were carried out by the Ecuadorian Association of Medical Experts in Integrative Medicine, a group of integrative medicine practitioners, ensuring the highest standards of medical research.

CDS deactivates spike proteins

Japanese researchers confirmed that CDS prevents SARS-CoV-2 spike proteins from binding to human receptors. An article published in the *Annals of Pharmacology and Pharmaceutics* explains how CDS blocks spike proteins associated with SARS-CoV-2, which are believed to bind to human receptors, enabling disease to develop.<sup>2</sup> These studies confirm that taking CDS regularly could provide a shield against spike protein damage that leads to heart inflammation or worse in some people.

More studies are likely needed to determine if this is true for people who have received mRNA injections (Pfizer, BioNTech, and Moderna), as these injections continually program human cells to produce spike proteins.

CDS protects from shedding

As it is now known that the variants are spread by the “vaccines” and thus also by the “vaccinated” through “shedding”. CDS could help the “unvaccinated” protect themselves against infection. It may also help the vaccinated and those who test ‘positive’ rid themselves of spike proteins.

CDS clears graphene oxide and nano materials

Dr Andreas Kalcker and his colleagues confirm that graphene oxide and magnetite (nanomaterial) have been found in all vaccines of every brand. CDS reduces the magnetism that graphene oxide has caused in people. Dr Kalcker explains that with CDS, chemical reactions increase oxygen and reduce these destructive processes, and therefore, the patients recover.

Making 100 parts per million (ppm) solution:

Add one CDS TAB to a one-litre bottle of distilled or purified water to make a 100ppm solution.

*Please do not use a metal lid or container, as it will rust. Glass is best.*

First-time users: begin with two teaspoons of the solution in a glass of water.

The amount consumed throughout the day can be increased if needed. CDS breaks down into oxygen and salt (nutrients required by all mammals).

IMPORTANT NOTE:

Always start with a low dose and increase gradually to your body’s needs.

Consider taking higher amounts 4 or 5 days a week as long as required, OR alternate periodically between a low dose and your maximum dose.

Allow 90 minutes before or after taking any antioxidants such as vitamin C or zinc.

Take 1/2 hour *before a meal* or 1.5 hours *after a meal*.

Two-hour protocol for acute issues: Take two teaspoons of solution in 60ml water every 15 minutes for 2 hours. If the condition does not improve in an hour, repeat. It can be consumed daily until desired results are achieved.

# CDS TABS

---

## Directions:

- To make a 100ppm solution, add one tablet to one litre of purified water and cap immediately to prevent off gassing.
- Allow one minute for the tablet to dissolve before use.
- Refrigerated, the litre of solution will hold optimum potency for approximately one month.

1000ml water = 100ppm solution. Dose = 2 tsp

500ml water = 200ppm solution. Dose = 1 tsp

## **Do Not Use A Metal Container or Lid.**

A Glass Bottle with an Airtight Silicon or Plastic Lid is Ideal.

**Suggested Use:** Begin with one dose of the solution in a glass of water daily. Gradually increase the number of glasses or the dose amount to your specific needs.

*Allow 90 minutes before or after taking any antioxidants such as vitamin C or oral zinc.*

## **2 Hour Protocol for Acute Issues:**

1 dose of solution in 60ml water every 15 min for 2 hours. If not improved within an hour, repeat. This protocol can be used daily until the desired results are achieved.

**Transdermal Application:** Topical application, dilute the solution with distilled water to make 50ppm. It can be sprayed or applied directly to the skin for relief of wounds, burns, herpes, shingles or any skin issues. A 50ppm solution is safe for eyes. The solution does not cause stinging or burning, it can relieve pain and help stop bleeding. Repeat application as often as required.

CDS has a toxicity equivalency of caffeine and it breaks down into oxygen and salt in the body.
